

1

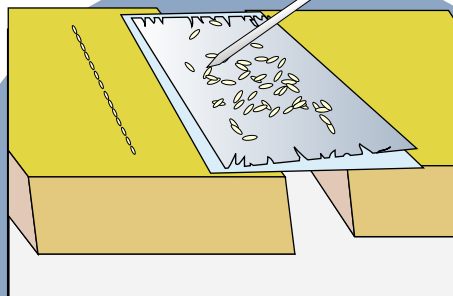

1 hr egg collection  
developed to  
stage 16/17

2

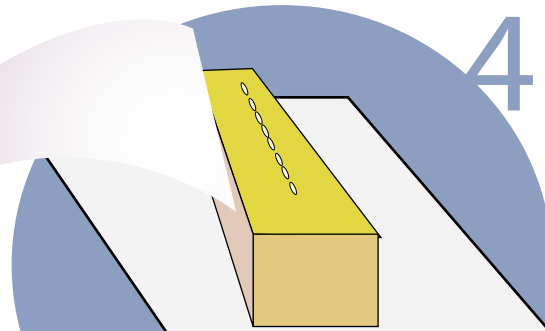

Transfer embryos to double sided  
sticky tape and let chorion  
dry for 5 minutes

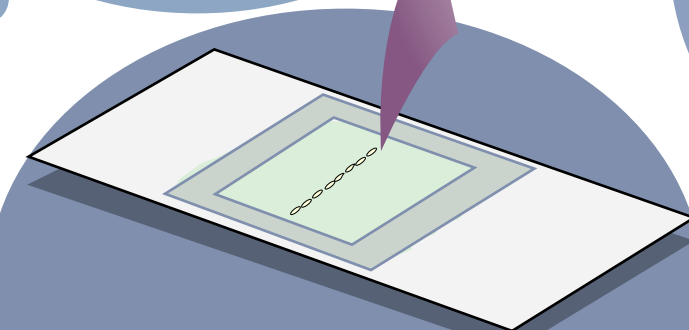

Mechanically dechorionate  
and align ventral side up  
on agar

3

4

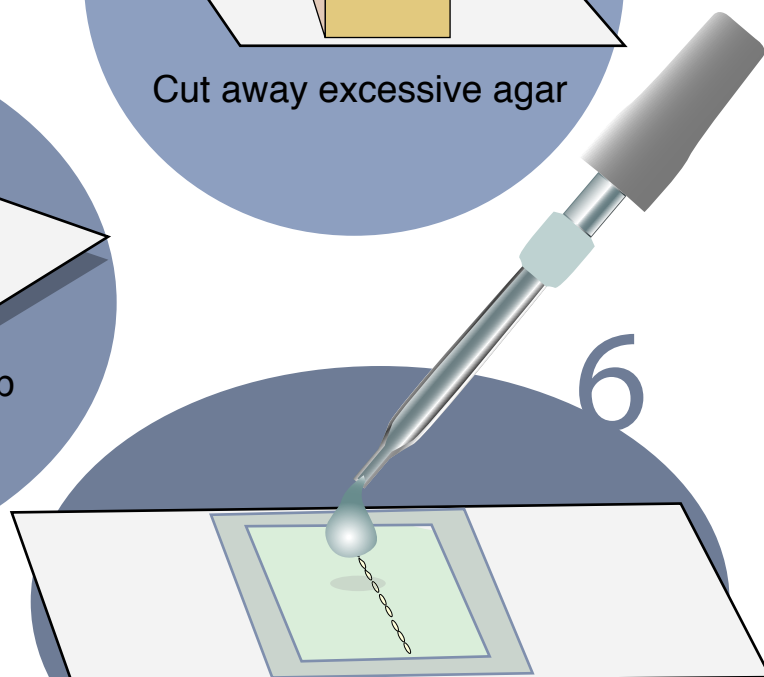

Cut away excessive agar

Transfer embryos to a coverslip  
with heptane glue and add a  
frame of (one sided)  
adhesive tape

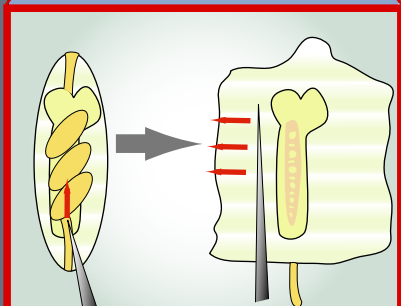

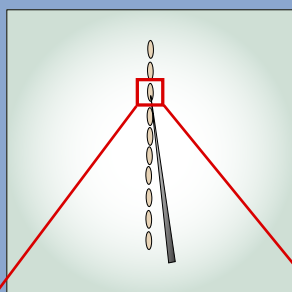

5

6

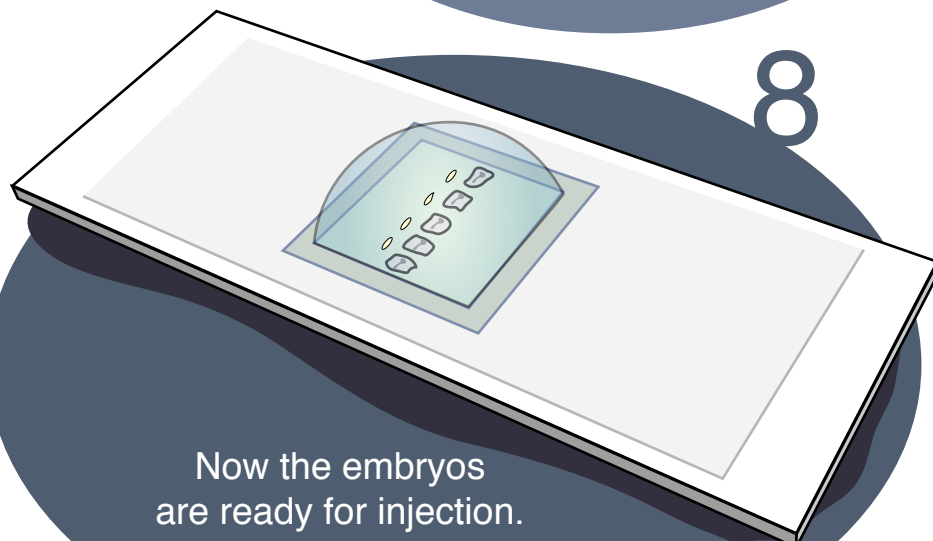

Fill the frame with PBS

7

Flat prep some embryos  
of the right age.

8

Now the embryos  
are ready for injection.
