

Statement on re-use of figure(s) from a previous publication

Manuscript: JoVE 56645

Title: A methodology for biomimetic chemical neuromodulation of rat retinas with the neurotransmitter glutamate in vitro

Authors: Corey M Rountree, John B Troy, Laxman Saggere

We are re-using one figure (Figure 1 in the JoVE manuscript) from another paper that has just been accepted for publication in an open-access journal, [Microsystems and Nanoengineering](#), published by Springer Nature under immediate (gold) CC-BY license. The article is yet to appear online, but both the open access CC-BY license and the publisher, Nature Research, allow for unrestricted dissemination and re-use of open access materials as described in the following text copied from the publisher's webpages with links.

Open access at Nature Research

*Open access articles in Springer Nature journals are published under Creative Commons licences. These provide an industry-standard framework to support easy re-use of open access material. **Under Creative Commons, authors retain copyright of their work. Authors publishing via the open access route in journals on the nature.com platform additionally assign Springer Nature a non-exclusive licence to publish (LTP).***

All Springer Nature-owned journals with open access options offer the CC BY licence ([Creative Commons Attribution v4.0 International Licence](#)), and this is the default licence for all Springer Nature-owned fully open access journals and for all journals in the Palgrave Macmillan portfolio. The CC BY licence is the most open licence available and considered the industry 'gold standard' for open access; it is also preferred by many funders. This licence allows readers to copy and redistribute the material in any medium or format, and to alter, transform, or build upon the material, including for commercial use, providing the original author is credited.

Nature Research author license policy

Nature Research does not require authors of original (primary) research papers to assign the copyright of their published contributions. Authors grant Nature Research an exclusive licence to publish, in return for which they can reuse their papers in their future printed work without first requiring permission from the publisher of the journal.
