transfer to experimental room
single house in drinking apparatus with 2 bottles of H_2O
• start daily measurements (food, body weight, H_2O intake)
stable H_2O intake
replace 1 bottle of H_2O with ethanol (10%)
stable EtOH intake
Pre-Drug
Drug
Post-Drug
administer control injection (all mice) during daily measurements
stable EtOH intake
asssign subjects to control & experimental group
• control group continues control injections during daily measurement
• experimental group switches to drug injections
acute or multi-day dosing
administer control injection (all mice) during daily measurement
