Martinsried, 17.07.2018

Dear Dr. DSouza,

We have revised our manuscript "A customizable protocol for string assembly gRNA cloning (STAgR)" (JoVE58556) and I enclose an updated version of the manuscript (marked and unmarked). We are encouraged that both reviewers have recognized the value of the presented protocol for the scientific community.

We are confident that we have addressed all the points raised by the reviewers and are grateful for their suggestions. We have altered Figure 1 with the aim to make the protocol procedure easier to understand. We also would suggest using a similar (animated) figure in the video.

In addition, we have adopted the suggested editorial changes, tried to improve the readability of our manuscript and thus hope that it is now acceptable for publication in JoVE.

Many thanks for considering our work,

Yours sincerely,

Dr. Stefan H. Stricker
