SHORT ABSTRACT:

The low-cost protocol consisting of footprint analysis and hanging box test after restraint stress is useful for evaluating the movement disorders of mouse model.

LONG ABSTRACT:

Gait disturbance is frequently observed in patients with movement disorders. In mouse models used for movement disorders, gait analysis is important behavioral test to determine whether the mice mimic the symptoms of patients. Motor deficits are often induced by stress when no spontaneous motor phenotype is observed in the mouse models. Therefore, gait analysis followed by stress loading would be a sensitive method for evaluating the motor phenotype in mouse models. However, researchers face the requirement of an expensive apparatus to obtain quantitative results automatically from gait analysis. For stress, stress loading by simple methods without expensive apparatuses required for electric shock and forced running is desirable. Therefore, we introduce a simple and low-cost protocol consisting of footprint analysis with paper and ink, hanging box test to evaluate motor function, and stress loading defined by restraint with a conical tube. The motor deficits of mice were successfully detected by this protocol.

INTRODUCTION:

Movement disorders are defined as disturbances of the nervous system showing an excess or paucity of voluntary or automatic movements¹. In particular, gait disturbance is frequently documented among patients with movement disorders²⁻⁴. Therefore, gait analysis is a suitable behavioral test for the validation of animal models of movement disorders. In mice, automated gait analyses have been performed for walking at natural speed⁵ and at adjustable speeds by treadmill^{6,7}. These analyses provide quantitative results of gait automatically. An alternative method to detect gait disturbance is called footprint analysis. After labeling the bottoms of the feet with ink, mice walk on paper, and the footprints are analyzed. Initially, Vaseline and powdered charcoal were used to visualize the footprint⁸, and then were replaced by Ink on polygraph paper⁹ and photographic developer on photographic paper¹⁰. A cheaper and less toxic method using ink and paper than the other methods remains to date¹¹. Footprint analysis

is less expensive compared with automated analysis⁵⁻⁷ and would be useful to evaluate the movement disorders in mouse models for the researchers without abundant research funds.

The hanging box test is a kind of four limb hanging tests using wire cage lid¹² and wire mesh screen¹³. The box is an apparatus with rotatable mesh lid on the top of box along a center bar. In addition to gait analysis, the test can be inexpensively and easily performed. Therefore, we conducted the hanging box test to evaluate grip strength and balance, in addition to the footprint analysis in this protocol.

Stress induces the symptoms of movement disorders^{14,15}. Motor deficits are often induced by several chronic stresses even when no spontaneous motor phenotype is observed in the mouse models of a movement disorder¹⁶⁻¹⁸. Restraint is one of the commonly used methods for stress loading in mice, because the animal is not physically harmed¹⁹ and cost is less compared with other methods such as electric shock with dedicated apparatus and forced running with use of a treadmill. Restraint by a tube, which is performed by confining a mouse in a holed 50 ml conical tube, is easier than other methods such as wire mesh strainer, taped limb, and wrapping of animal with gauze (reviewed in ref. 20). In this paper, we summarize the protocols of footprint analysis and the hanging box test after restraint by a tube. This protocol would help us to use mouse models of movement disorders without spontaneous motor phenotype.

PROTOCOL:

All animal experiments were conducted in a humane manner. The Institutional Animal Experiment Committee of Jichi Medical University approved the study. The study was conducted in accordance with the Institutional Regulation for Animal Experiment and Fundamental Guideline for Proper Conduct of Animal Experiment and Related Activities in Academic Research Institutions under the jurisdiction of the MEXT of Japan. Mice used in this protocol have been described previously²¹.

1. Hanging Box Test

1.1. Record the weight of each mouse. Mark the tail by marking pen for individual discrimination (e.g., a line, double lines, and triple lines).

NOTE: Growth curves are used for an index of general health²².

1.2. Place the mice in the experimental room at least 30 min before the behavioral test. Set the hanging box, which consists of a clear box (25 x 25 x 40 cm) with a rotatable mesh lid on the top (**Figure 1**). The mesh lid can be rotated along a central bar so that the top is flipped 180 degrees.

1.3. Put a mouse in the center of the mesh lid. Carefully turn the mesh lid up side down.

1.4. Measure the fall latency (hanging time) of the mouse from the mesh lid.

NOTE: If the mouse does not fall within 5 min, record the latency as 5 min.

1.5. Return the mouse to the home cage. Clean the hanging box with 70% ethanol after every test.

2. Footprint Analysis

NOTE: Following the hanging box test, perform the footprint analysis.

2.1. Set up the Runway (Figure 2A).

2.1.1. Cut a piece of white paper (29.7 cm x 42 cm x 0.09 mm) longitudinally into three lengths of equal width. Set a piece of the white paper (9.9 cm x 42 cm) on the table.

2.1.2. Put the dark goal box at the distal end of the paper. Put other boxes (approximately the same length as that of the paper) with the walls on both sides of the runway, preventing the escape of mice.

2.1.3. Put black ink and red ink into separate Petri dishes (35 mm in diameter).

2.2. Training session.

NOTE: Perform the training session only at 4 weeks of age.

2.2.1. Put a mouse on the proximal end of the paper (Face the head toward the goal box). Let the mouse walk from the proximal end to the goal box. Remove the mouse from the goal box. If the mouse stops on the paper, gently push the mouse to the goal box by finger.

2.2.2. Hold the mouse by grasping the scruff between the thumb and forefinger to limit the movement of forelimbs. Then, grasp the back and the tail between the ball of the thumb and the other fingers to limit the movement of hindlimbs.

NOTE: Insufficient holding of a mouse results in blots of ink on clothing.

2.2.3. Immerse the bottoms of forelimbs in red ink and the bottoms of hindlimbs in black ink. Immediately put the mouse on the proximal end of the paper (Face the head toward the goal box). Let the mouse walk from the proximal end to the goal box. If the mouse stops on the paper, gently push the mouse to the goal box by finger.

2.2.4. Remove the mouse from the goal box. Go to the test session.

2.3. Test Session.

2.3.1. Following the training session, set up the runway for footprints with a new cut piece of

white paper.

2.3.2. Hold the mouse by grasping the scruff between the thumb and forefinger to limit the movement of forelimbs. Then, grasp the back and the tail between the ball of the thumb and the other fingers to limit the movement of hindlimbs.

2.3.3. Immerse the bottoms of forelimbs in red ink and the bottoms of hindlimbs in black ink. Immediately put the mouse on the proximal end of the paper. Let the mouse walk from the proximal end to the goal box.

NOTE: Because mice prefer the dark, walking becomes steadier as the mouse approaches the dark goal box. If the mouse stops on the paper, gently push the mouse to the goal box by finger. Then, if reliable footprints are not obtained for analysis (see step 2.4. Analysis of footprints for details) because the mouse stopped, retry the test session.

2.3.4. Return the mouse to the home cage from the goal box. Clean the goal box with 70% ethanol after each test session. Air-dry the foot-printed paper.

2.4. Analysis of footprints

2.4.1. Obtain three measurements of each parameter (stride lengths of forelimbs and hindlimbs, front and hind base widths, overlap between forelimb and hindlimb, **Figure 2B**) with a ruler from foot-printed paper.

NOTE: Because footprints of proximal and distal ends frequently show large variations because of stopping or running, choose the part with a steady gait pattern of footprints. The middle part of the foot-printed paper will usually be suitable for the analysis.

2.4.1.1. For the stride length, measure the distances between the same parts of the paw (e.g., paw pad or toe).

2.4.1.2. For the front base width, draw a line between consecutive right (or left) front footprints. Then, measure the length of the vertical line from the pad of the left (or right) front footprint to the line drawn between the right (or left) footprints.

2.4.1.3. For the hind base width, draw a line between consecutive right (or left) hind footprints. Then, measure the length of the vertical line from the pad of the left (or right) hind footprint to the line drawn between the right (or left) footprints.

2.4.1.4. For overlap, measure the distance between pads of left (or right) front and hind footprints.

2.4.2. Average the three measurements for each individual. Use the individual average of each parameter for the statistical analysis.

2.4.2.1. For the stride length, use the average of the individual averages of the left and right strides.

2.4.2.2. For asymmetry of stride length, use the absolute value of the difference between individual averages of left limb and right limb stride length.

2.4.2.3. For the statistical analysis of the other parameters (front base width, hind base width, and overlap), use the individual average directly.

3. Restraint Stress Loading

3.1. Preparation of Restraint Tubes.

3.1.1. Make 16 holes (approximately 2 mm in diameter) in a 50 ml conical tube (30 mm in diameter x 115 mm in length) along the scale marks (5, 10, 15, 20, 25, 30, 35, 40 mL) and the backside of each scale mark by square drill (**Figure 3**). Make a hole on the tip of the 50 mL conical tube (approximately 5 mm in diameter) for breathing by cutting off the tip. Make a hole (approximately 4 mm in diameter) in the tube cap to pass the tail of mice.

3.2. Stress Loading

3.2.1. Place the mice in the experimental room.

3.2.2. Hold a mouse by grasping the scruff between the thumb and the forefinger. Enter the mouse into the restraint tube from the head. Pass the tail through the hole in the cap. Close the cap.

NOTE: Limit the forelimb movement, because mice reject entering the tube by the forelimbs.

3.2.3. Keep the mouse enclosed for 2 h on a desk at room temperature. Remove the mouse from the restraint tube and return to the home cage.

NOTE: The restraint tubes can be reused after a wash and dry.

4. Experimental Schedule (Figure 4):

4.1. Perform the hanging box test and the footprint analysis on the same day at 4 weeks of age (see step 1. Hanging box test and step 2. Footprint analysis for details) as a baseline measurement on all mice prior to the grouping into 'stress group' and a 'non-stress group'.

NOTE: About 8-10 mice in 2-3 litters may be suitable to use in an experiment. Footprint analysis at 4 weeks of age consists of training and test sessions.

4.2. Randomly divide the mice into a 'stress group' and a 'non-stress group'.

NOTE: When the mice are used consisting of several litters, divide littermates evenly into both groups. Number in each group consists of about 4-5 mice.

4.3. Apply the restraint stress to the 'stress group' 6 times over the course of two weeks (see step 3. Restraint stress loading for details).

NOTE: 6 times of restraint are applied every two weeks, followed by a hanging box test and footprint analysis from 6-12 weeks of age. Do not apply the restraint stress on the test day of the hanging box test and the footprint analysis.

4.4. Perform the hanging box test and the test session of footprint analysis on the same day at 6, 8, 10, and 12 weeks of age.

REPRESENTATIVE RESULTS:

The heterozygous male mice of *Atp1a3* (*Atp1a3*^{+/-}) that are the mouse model for rapid onset dystonia parkinsonism and wild-type littermates were used in this protocol. *Atp1a3*^{+/-} showed significantly shorter stride lengths of forelimb and hindlimb than those of the wild type at 4 weeks of age (**Figure 5A** and **Figure 5B**, open circle and square). 'Stressed' *Atp1a3*^{+/-} showed significantly shorter stride lengths of both limbs than those of 'non-stressed' *Atp1a3*^{+/-} at 8 weeks of age (**Figure 5A** and **Figure 5B**, closed and open circle). Asymmetries of stride lengths of both limbs were not significantly different in all groups of mice at all ages (**Figure 5C** and **Figure 5D**). The front base and overlaps of both limbs were also similar in all groups at all ages (**Figure 5E, G, H**). The hind base was significantly wider in the 'stressed' *Atp1a3*^{+/-} than that in the 'stressed' wild-type mice at 10 weeks of age (**Figure 5F**, closed circle and square). Thus, restraint stress caused motor deficits (short stride and wide base) of *Atp1a3*^{+/-}.

The hanging box test was performed to evaluate the grip strength and balance on the test day of footprint analysis. No significant differences in hanging time were observed in 4 to 10 weeks old mice (**Figure 6**). At 12 weeks of age, the hanging time of 'stressed' wild-type mice was significantly longer than that of the other groups (**Figure 6**, closed square). Restraint stress prolonged hanging time in wild-type mice only, but not in *Atp1a3*^{+/-}. Thus, the motor deficit of *Atp1a3*^{+/-} was distinguishable from wild-type mice by restraint stress.

Body weight is an index of general health²². We measured the body weight of mice on the test day of the hanging box test and footprint analysis, and no significant differences were observed in all groups of mice at all ages (**Figure 7**). Thus, restraint stress did not affect the general health of mice.

FIGURE AND TABLE LEGENDS:

Figure 1: Hanging box apparatus with a rotatable mesh lid. A mouse was placed in the center

of the mesh lid, and then the mesh lid was turned up side down. The fall latency of the mouse from the mesh lid is to be measured.

Figure 2: Footprint analysis. (A) Runway for footprint analysis. A foot-painted mouse (forelimbs: red ink; hindlimbs: black ink) was allowed to walk from the proximal end to the goal box. (B) Representative image of footprint and measurement of parameters. Three measurements of each parameter (forelimb and hindlimb stride lengths, widths of front and hind base, overlap between forelimb and hindlimb) were obtained from foot-printed paper.

Figure 3: Restraint stress by holed 50 mL conical tube. The restraint tube has a hole for breathing, a hole for passing the tail, and 16 holes for air circulation. Mouse was kept in the tube for 2 h at room temperature.

Figure 4: Experimental schedule of the hanging box test and the footprint analysis with the chronic restraint stress loading. Footprint analysis and the hanging box test were performed at 4 weeks of age. Then, the mice were split into 'stressed' and 'non-stressed' groups. For the 'stressed' group, the restraint stress was applied 6 times in 2 weeks until 12 weeks of age. For both groups, footprint analysis and the hanging box test were performed once per 2 weeks until 12 weeks of age.

Figure 5: Representative results of footprint analyses. Footprint analysis was performed with 4-week-old *Atp1a3*^{+/-} (a3) and wild-type (wt) mice (N = 19 and 17, respectively). Then, *Atp1a3*^{+/-} and wild-type mice were split into 'stressed' and 'non-stressed' groups. Footprint analysis was conducted for 'non-stressed' *Atp1a3*^{+/-}, 'non-stressed' wild-type, 'stressed' *Atp1a3*^{+/-}, and 'stressed' wild-type mice from 6–12 weeks of age (open circles, N = 9; open squares, N = 8; solid circles, N = 10; solid squares, N = 9, respectively). (A) Stride length of forelimb. (B) Stride length of hindlimb. (C) Asymmetry of forelimb strides length. (D) Asymmetry of hindlimb strides length. (E) Width between forelimbs. (F) Width between hindlimbs. (G) Overlap between left forelimb and hindlimb. (H) Overlap between right forelimb and hindlimb. Data are the mean ± SD. Statistical analyses (*t*-test for 4-week-old mice and pairwise *t*-test with the Holm adjustment method for 6-12-week-old mice) were performed by R²³. # *p* < .05, for 'non-stressed' *Atp1a3*^{+/-} and 'non-stressed' wild-type mice. * *p* < .05, for 'stressed' *Atp1a3*^{+/-} and 'stressed' wild-type mice. + *p* < .05, for 'non-stressed' and 'stressed' *Atp1a3*^{+/-} mice. **Figure 5A-F** has been modified from ref. 18 with permission of Elsevier.

Figure 6: Representative results of hanging box tests. The hanging box test was performed with *Atp1a3*^{+/-} (a3) and wild-type (wt) mice at 4 weeks of age. Then, *Atp1a3*^{+/-} and wild-type mice were split into 'stressed' and 'non-stressed' groups. Hanging time of 4-week-old *Atp1a3*^{+/-} (open circles, N = 19) and wild-type (open squares, N = 17) mice and hanging time of 6–12-week-old 'non-stressed' *Atp1a3*^{+/-} (open circles, N = 9), 'non-stressed' wild-type (open squares, N = 8), 'stressed' *Atp1a3*^{+/-} (solid circles, N = 10), and 'stressed' wild-type (solid squares, N = 9) mice were plotted on a logarithmic scale. Data are the mean ± SD. Statistical

analyses (t -test for 4-week-old mice and pairwise t -test with the Holm adjustment method for 6-12-week-old mice) were performed by R²³. * $p < .05$, for 'stressed' *Atp1a3*^{+/-} and 'stressed' wild-type mice. \$ $p < .05$, for 'non-stressed' and 'stressed' wild-type mice. + $p < .05$, for 'non-stressed' *Atp1a3*^{+/-} and 'stressed' wild-type mice. Data has been reprinted from ref. 18 with permission of Elsevier.

Figure 7: Representative results of growth curves. Body weights were measured of *Atp1a3*^{+/-} (a3) and wild-type (wt) mice at 4 weeks of age (open circles, N = 19; open squares, N = 17, respectively). Then, *Atp1a3*^{+/-} and wild-type mice were split into 'stressed' and 'non-stressed' groups. Body weights between 6 and 12 weeks of age of 'non-stressed' *Atp1a3*^{+/-} (open circles, N = 9), 'non-stressed' wild-type (open squares, N = 8), 'stressed' *Atp1a3*^{+/-} (solid circles, N = 10), and 'stressed' wild-type (solid squares, N = 9) mice were measured. Data are the mean \pm SD. Statistical analyses (t -test for 4-week-old mice and pairwise t -test with the Holm adjustment method for 6-12-week-old mice) were performed by R²³. Data has been reprinted from ref. 18 with permission of Elsevier.

DISCUSSION:

The footprint analysis and the hanging box test are simple and inexpensive behavioral tests for the motor function of mice. The neurobehavioral phenotypes in several mouse models have been successfully detected by these tests. For example, shortened stride length in amyotrophic lateral sclerosis²⁴, increased length of asymmetrical stride in ataxia-telangiectasia²⁵, increased length of overlap in Huntington's disease²⁶ and dystonia²⁷, and widened base in ataxia^{28,29}, Angelman syndrome³⁰ and dystonia³¹ were demonstrated by the footprint analysis. Additionally, shorter hanging time than that of the control mice was observed in mouse model of Duchenne muscular dystrophy³². Thus, both tests described in this paper would be useful for evaluating motor dysfunction of mice.

There is a critical step of this protocol to obtain the sharp footprints. It is very important to put a mouse on paper immediately after immersing the bottoms of limbs in ink to avoid drying. It is necessary to finish the immersing steps (steps 2.2.3 and 2.3.3) in a short time. A disadvantage of this protocol of footprint analysis is that the parameters obtained are limited to simple ones that do not include temporal information (e.g., duration of gait cycle and step sequence of each foot) and physical information (e.g., pressure of footprint based on touch-sensitive LED panel). When temporal and physical information is required, an automated gait analysis apparatus must be used. Alternatively, temporal information of gait pattern can be obtained by high-speed camera³³. Another disadvantage is that measuring the parameters on foot-printed paper is more laborious than automated gait analysis. For future application, the development of a program for semiautomated or automated data collection from foot-printed paper will be required to decrease the effort expended measuring parameters.

For the stress loading, total number and duration per session can be varied in this protocol. Restraint stress has been conducted with various durations and number of applications (e.g., single for 5 min³⁴, single for 24 h³⁵, 12 h x 5 sessions³⁶, and 6 h x 31 sessions³⁷, reviewed in ref.

20). To our knowledge, no systematic study concerns the effects of total number and duration per session on the motor function of mice. The activity of mice in the open field is affected by single stress loading of 1 h³⁸ or 2 h but not by that of 15 min¹⁹. Prolonged duration of stress loading may lead to severe motor deficits. For the number of stress loadings, the stance of mice becomes wider than that of non-stressed mice after 36 times of stress loading (1 h twice weekly), but not after 30 times³⁹. Chronic restraint stress (6 h per day for 31 consecutive days) aggravates rotarod performance in the mouse model of Parkinson's disease³⁷. Our results showed the hanging time of 'stressed' *Atp1a3*^{+/-} mice became shorter than that of the 'stressed' wild-type mice after 24 times of stress loading (at 12 weeks of age), but not after 18 times or less (at 4, 6, 8, and 10 weeks of age). Therefore, repeated stress loading is required for induction of certain motor deficits in mice, although the induction of motor deficits after a long period from the start of a single or several times of stress loading cannot be excluded. When mice do not show a neurobehavioral phenotype in this protocol, the recommendation is to increase the total number and duration of stress loading per session. By contrast, when the mice show gait abnormality from a single or several times of stress loading, duration and number can be decreased.

Finally, performance of walking and hanging can be affected by emotional behavioral characters (e.g., anxiety and activity) other than those of motor dysfunction. Mice with high anxiety and with hyperactivity often run (instead of walk) to the goal box. Mice showing depression-like behavior may walk with frequent stops. Therefore, an aberrant footprint pattern may not be due to motor deficits. Thus, to confirm the gait abnormality resulting only from motor deficits, performing additional tests that evaluate emotional characteristics (activity: open field test; anxiety: open field and elevated plus maze test; depression-like behavior: forced swim test) after this protocol as described previously¹⁸ is advisable.

ARTICLE AND VIDEO LICENSE AGREEMENT

Title of Article:

Low-cost protocol of footprint analysis and hanging box test for mice applied the chronic restraint stress

Author(s):

Hiroki Sugimoto & Kawakami Kiyoshi

Item 1: The Author elects to have the Materials be made available (as described at <http://www.jove.com/publish>) via:

Standard Access

Open Access

Item 2: Please select one of the following items:

The Author is **NOT** a United States government employee.

The Author is a United States government employee and the Materials were prepared in the course of his or her duties as a United States government employee.

The Author is a United States government employee but the Materials were NOT prepared in the course of his or her duties as a United States government employee.

ARTICLE AND VIDEO LICENSE AGREEMENT

1. **Defined Terms.** As used in this Article and Video License Agreement, the following terms shall have the following meanings: “**Agreement**” means this Article and Video License Agreement; “**Article**” means the article specified on the last page of this Agreement, including any associated materials such as texts, figures, tables, artwork, abstracts, or summaries contained therein; “**Author**” means the author who is a signatory to this Agreement; “**Collective Work**” means a work, such as a periodical issue, anthology or encyclopedia, in which the Materials in their entirety in unmodified form, along with a number of other contributions, constituting separate and independent works in themselves, are assembled into a collective whole; “**CRC License**” means the Creative Commons Attribution-Non Commercial-No Derivs 3.0 Unported Agreement, the terms and conditions of which can be found at: <http://creativecommons.org/licenses/by-nc-nd/3.0/legalcode>; “**Derivative Work**” means a work based upon the Materials or upon the Materials and other pre-existing works, such as a translation, musical arrangement, dramatization, fictionalization, motion picture version, sound recording, art reproduction, abridgment, condensation, or any other form in which the Materials may be recast, transformed, or adapted; “**Institution**” means the institution, listed on the last page of this Agreement, by which the Author was employed at the time of the creation of the Materials; “**JoVE**” means MyJoVE Corporation, a Massachusetts corporation and the publisher of The Journal of Visualized Experiments; “**Materials**” means the Article and / or the Video; “**Parties**” means the Author and JoVE; “**Video**” means any video(s) made by the Author, alone or in conjunction with any other parties, or by JoVE or its affiliates or agents, individually or in collaboration with the Author or any other parties, incorporating all or any portion

of the Article, and in which the Author may or may not appear.

2. **Background.** The Author, who is the author of the Article, in order to ensure the dissemination and protection of the Article, desires to have the JoVE publish the Article and create and transmit videos based on the Article. In furtherance of such goals, the Parties desire to memorialize in this Agreement the respective rights of each Party in and to the Article and the Video.

3. **Grant of Rights in Article.** In consideration of JoVE agreeing to publish the Article, the Author hereby grants to JoVE, subject to **Sections 4 and 7** below, the exclusive, royalty-free, perpetual (for the full term of copyright in the Article, including any extensions thereto) license (a) to publish, reproduce, distribute, display and store the Article in all forms, formats and media whether now known or hereafter developed (including without limitation in print, digital and electronic form) throughout the world, (b) to translate the Article into other languages, create adaptations, summaries or extracts of the Article or other Derivative Works (including, without limitation, the Video) or Collective Works based on all or any portion of the Article and exercise all of the rights set forth in (a) above in such translations, adaptations, summaries, extracts, Derivative Works or Collective Works and (c) to license others to do any or all of the above. The foregoing rights may be exercised in all media and formats, whether now known or hereafter devised, and include the right to make such modifications as are technically necessary to exercise the rights in other media and formats. If the “Open Access” box has been checked in **Item 1** above, JoVE and the Author hereby grant to the public all such rights in the Article as provided in, but subject to all limitations and requirements set forth in, the CRC License.

ARTICLE AND VIDEO LICENSE AGREEMENT

4. **Retention of Rights in Article.** Notwithstanding the exclusive license granted to JoVE in **Section 3** above, the Author shall, with respect to the Article, retain the non-exclusive right to use all or part of the Article for the non-commercial purpose of giving lectures, presentations or teaching classes, and to post a copy of the Article on the Institution's website or the Author's personal website, in each case provided that a link to the Article on the JoVE website is provided and notice of JoVE's copyright in the Article is included. All non-copyright intellectual property rights in and to the Article, such as patent rights, shall remain with the Author.

5. **Grant of Rights in Video – Standard Access.** This **Section 5** applies if the "Standard Access" box has been checked in **Item 1** above or if no box has been checked in **Item 1** above. In consideration of JoVE agreeing to produce, display or otherwise assist with the Video, the Author hereby acknowledges and agrees that, Subject to **Section 7** below, JoVE is and shall be the sole and exclusive owner of all rights of any nature, including, without limitation, all copyrights, in and to the Video. To the extent that, by law, the Author is deemed, now or at any time in the future, to have any rights of any nature in or to the Video, the Author hereby disclaims all such rights and transfers all such rights to JoVE.

6. **Grant of Rights in Video – Open Access.** This **Section 6** applies only if the "Open Access" box has been checked in **Item 1** above. In consideration of JoVE agreeing to produce, display or otherwise assist with the Video, the Author hereby grants to JoVE, subject to **Section 7** below, the exclusive, royalty-free, perpetual (for the full term of copyright in the Article, including any extensions thereto) license (a) to publish, reproduce, distribute, display and store the Video in all forms, formats and media whether now known or hereafter developed (including without limitation in print, digital and electronic form) throughout the world, (b) to translate the Video into other languages, create adaptations, summaries or extracts of the Video or other Derivative Works or Collective Works based on all or any portion of the Video and exercise all of the rights set forth in (a) above in such translations, adaptations, summaries, extracts, Derivative Works or Collective Works and (c) to license others to do any or all of the above. The foregoing rights may be exercised in all media and formats, whether now known or hereafter devised, and include the right to make such modifications as are technically necessary to exercise the rights in other media and formats. For any Video to which this **Section 6** is applicable, JoVE and the Author hereby grant to the public all such rights in the Video as provided in, but subject to all limitations and requirements set forth in, the CRC License.

7. **Government Employees.** If the Author is a United States government employee and the Article was prepared in the course of his or her duties as a United States government employee, as indicated in **Item 2** above, and any of the licenses or grants granted by the Author hereunder exceed the scope of the 17 U.S.C. 403, then the rights granted hereunder shall be limited to the maximum

rights permitted under such statute. In such case, all provisions contained herein that are not in conflict with such statute shall remain in full force and effect, and all provisions contained herein that do so conflict shall be deemed to be amended so as to provide to JoVE the maximum rights permissible within such statute.

8. **Protection of the Work.** The Author(s) authorize JoVE to take steps in the Author(s) name and on their behalf if JoVE believes some third party could be infringing or might infringe the copyright of either the Author's Article and/or Video.

9. **Likeness, Privacy, Personality.** The Author hereby grants JoVE the right to use the Author's name, voice, likeness, picture, photograph, image, biography and performance in any way, commercial or otherwise, in connection with the Materials and the sale, promotion and distribution thereof. The Author hereby waives any and all rights he or she may have, relating to his or her appearance in the Video or otherwise relating to the Materials, under all applicable privacy, likeness, personality or similar laws.

10. **Author Warranties.** The Author represents and warrants that the Article is original, that it has not been published, that the copyright interest is owned by the Author (or, if more than one author is listed at the beginning of this Agreement, by such authors collectively) and has not been assigned, licensed, or otherwise transferred to any other party. The Author represents and warrants that the author(s) listed at the top of this Agreement are the only authors of the Materials. If more than one author is listed at the top of this Agreement and if any such author has not entered into a separate Article and Video License Agreement with JoVE relating to the Materials, the Author represents and warrants that the Author has been authorized by each of the other such authors to execute this Agreement on his or her behalf and to bind him or her with respect to the terms of this Agreement as if each of them had been a party hereto as an Author. The Author warrants that the use, reproduction, distribution, public or private performance or display, and/or modification of all or any portion of the Materials does not and will not violate, infringe and/or misappropriate the patent, trademark, intellectual property or other rights of any third party. The Author represents and warrants that it has and will continue to comply with all government, institutional and other regulations, including, without limitation all institutional, laboratory, hospital, ethical, human and animal treatment, privacy, and all other rules, regulations, laws, procedures or guidelines, applicable to the Materials, and that all research involving human and animal subjects has been approved by the Author's relevant institutional review board.

11. **JoVE Discretion.** If the Author requests the assistance of JoVE in producing the Video in the Author's facility, the Author shall ensure that the presence of JoVE employees, agents or independent contractors is in accordance with the relevant regulations of the Author's institution. If more than one author is listed at the beginning of this Agreement, JoVE may, in its sole

ARTICLE AND VIDEO LICENSE AGREEMENT

discretion, elect not take any action with respect to the Article until such time as it has received complete, executed Article and Video License Agreements from each such author. JoVE reserves the right, in its absolute and sole discretion and without giving any reason therefore, to accept or decline any work submitted to JoVE. JoVE and its employees, agents and independent contractors shall have full, unfettered access to the facilities of the Author or of the Author's institution as necessary to make the Video, whether actually published or not. JoVE has sole discretion as to the method of making and publishing the Materials, including, without limitation, to all decisions regarding editing, lighting, filming, timing of publication, if any, length, quality, content and the like.

12. **Indemnification.** The Author agrees to indemnify JoVE and/or its successors and assigns from and against any and all claims, costs, and expenses, including attorney's fees, arising out of any breach of any warranty or other representations contained herein. The Author further agrees to indemnify and hold harmless JoVE from and against any and all claims, costs, and expenses, including attorney's fees, resulting from the breach by the Author of any representation or warranty contained herein or from allegations or instances of violation of intellectual property rights, damage to the Author's or the Author's institution's facilities, fraud, libel, defamation, research, equipment, experiments, property damage, personal injury, violations of institutional, laboratory, hospital, ethical, human and animal treatment, privacy or other rules, regulations, laws, procedures or guidelines, liabilities and other losses or damages related in any way to the submission of work to JoVE, making of videos by JoVE, or publication in JoVE or elsewhere by JoVE. The Author shall be responsible for, and shall hold JoVE harmless from, damages caused by lack of sterilization, lack of cleanliness or by contamination due to

the making of a video by JoVE its employees, agents or independent contractors. All sterilization, cleanliness or decontamination procedures shall be solely the responsibility of the Author and shall be undertaken at the Author's expense. All indemnifications provided herein shall include JoVE's attorney's fees and costs related to said losses or damages. Such indemnification and holding harmless shall include such losses or damages incurred by, or in connection with, acts or omissions of JoVE, its employees, agents or independent contractors.

13. **Fees.** To cover the cost incurred for publication, JoVE must receive payment before production and publication the Materials. Payment is due in 21 days of invoice. Should the Materials not be published due to an editorial or production decision, these funds will be returned to the Author. Withdrawal by the Author of any submitted Materials after final peer review approval will result in a US\$1,200 fee to cover pre-production expenses incurred by JoVE. If payment is not received by the completion of filming, production and publication of the Materials will be suspended until payment is received.

14. **Transfer, Governing Law.** This Agreement may be assigned by JoVE and shall inure to the benefits of any of JoVE's successors and assignees. This Agreement shall be governed and construed by the internal laws of the Commonwealth of Massachusetts without giving effect to any conflict of law provision thereunder. This Agreement may be executed in counterparts, each of which shall be deemed an original, but all of which together shall be deemed to be one and the same agreement. A signed copy of this Agreement delivered by facsimile, e-mail or other means of electronic transmission shall be deemed to have the same legal effect as delivery of an original signed copy of this Agreement.

A signed copy of this document must be sent with all new submissions. Only one Agreement is required per submission.

CORRESPONDING AUTHOR

Department:	Division of Biology, Center for Molecular Medicine	
Institution:	Jichi Medical University	
Title:	Professor	
Signature:		Date: 08/30/2018

Please submit a **signed** and **dated** copy of this license by one of the following three methods:

1. Upload an electronic version on the JoVE submission site
2. Fax the document to +1.866.381.2236
3. Mail the document to JoVE / Attn: JoVE Editorial / 1 Alewife Center #200 / Cambridge, MA 02140

Dear Dr. Bing Wu

Here, we have uploaded the revised manuscript [JoVE59027R1] entitled " Low-cost protocol of footprint analysis and hanging box test for mice applied the chronic restraint stress " through the website.

Thank you for editorial comments. We have changed the manuscript based on the comments. We have answered all of the comments in the revised manuscript and have summarized our responses to the comments below.

We hope that the paper is now acceptable for publication in Journal of Visualized Experiment.

Sincerely,

Hiroki Sugimoto

Point-by-point response to Editorial and reviewer's comments (Our response in blue)

1. Please take this opportunity to thoroughly proofread the manuscript to ensure that there are no spelling or grammar issues.

Response: We have checked the issues by self-check and proofing tool of Word.

We changed "nonstressed" to "non-stressed" in the text and Figure 5-7,

"nonstress" to "non-stress" in the text and Figure 4,

"vaseline" to "Vaseline" in line 43,

"more steady" to "steadier" in line 144,

and "stride" to "strides" in line 292 and 293, and Figure 5C and D.

2. The highlighted protocol steps are over the 2.75 page limit (including headings and spacing). Please highlight fewer steps for filming.

Response: We have highlighted fewer steps as suggested.

3. Please do not highlight notes for filming.

Response: We have removed the highlight of notes as suggested.

4. We suggest move Step 1 to the end of the Protocol for clarity.

Response: We have moved Step 1 to the end of the Protocol as suggested. Then, we have changed numbering of step and Figure.

5. Figure 2: Please provide a short description in addition to the figure title in Figure Legend.

Response: We have added a short description as suggested, and we have renumbered Figure 2 to Figure 1 according to the comment 4.

6. Figure 4: Please provide a short description in addition to the figure title in Figure Legend.

Response: We have added a short description as suggested, and we have renumbered Figure 4 to Figure 3 according to the comment 4. In addition, we have added a short description in Figure 3, and we have renumbered Figure 3 to Figure 2 according to the comment 4.

Thank you for your order!

Dear Dr. Hiroki Sugimoto,

Thank you for placing your order through Copyright Clearance Center's RightsLink® service.

Terms and Conditions

INTRODUCTION

1. The publisher for this copyrighted material is Elsevier. By clicking "accept" in connection with completing this licensing transaction, you agree that the following terms and conditions apply to this transaction (along with the Billing and Payment terms and conditions established by Copyright Clearance Center, Inc. ("CCC"), at the time that you opened your Rightslink account and that are available at any time at <http://myaccount.copyright.com>).

GENERAL TERMS

2. Elsevier hereby grants you permission to reproduce the aforementioned material subject to the terms and conditions indicated.

3. Acknowledgement: If any part of the material to be used (for example, figures) has appeared in our publication with credit or acknowledgement to another source, permission must also be sought from that source. If such permission is not obtained then that material may not be included in your publication/copies. Suitable acknowledgement to the source must be made, either as a footnote or in a reference list at the end of your publication, as follows:

"Reprinted from Publication title, Vol /edition number, Author(s), Title of article / title of chapter, Pages No., Copyright (Year), with permission from Elsevier [OR APPLICABLE SOCIETY COPYRIGHT OWNER]." Also Lancet special credit - "Reprinted from The Lancet, Vol. number, Author(s), Title of article, Pages No., Copyright (Year), with permission from Elsevier."

4. Reproduction of this material is confined to the purpose and/or media for which permission is hereby given.

5. Altering/Modifying Material: Not Permitted. However figures and illustrations may be altered/adapted minimally to serve your work. Any other abbreviations, additions, deletions and/or any other alterations shall be made only with prior written authorization of Elsevier Ltd. (Please contact Elsevier at permissions@elsevier.com). No modifications can be made to any Lancet figures/tables and they must be reproduced in full.

6. If the permission fee for the requested use of our material is waived in this instance, please be advised that your future requests for Elsevier materials may attract a fee.

7. Reservation of Rights: Publisher reserves all rights not specifically granted in the combination of (i) the license details provided by you and accepted in the course of this licensing transaction, (ii) these terms and conditions and (iii) CCC's Billing and Payment terms and conditions.

8. License Contingent Upon Payment: While you may exercise the rights licensed immediately upon issuance of the license at the end of the licensing process for the transaction, provided that you have disclosed complete and accurate details of your proposed use, no license is finally effective unless and until full payment is received from you (either by publisher or by CCC) as provided in CCC's Billing and Payment terms and conditions. If full payment is not received on a timely basis, then any license preliminarily granted shall be

deemed automatically revoked and shall be void as if never granted. Further, in the event that you breach any of these terms and conditions or any of CCC's Billing and Payment terms and conditions, the license is automatically revoked and shall be void as if never granted. Use of materials as described in a revoked license, as well as any use of the materials beyond the scope of an unrevoked license, may constitute copyright infringement and publisher reserves the right to take any and all action to protect its copyright in the materials.

9. Warranties: Publisher makes no representations or warranties with respect to the licensed material.

10. Indemnity: You hereby indemnify and agree to hold harmless publisher and CCC, and their respective officers, directors, employees and agents, from and against any and all claims arising out of your use of the licensed material other than as specifically authorized pursuant to this license.

11. No Transfer of License: This license is personal to you and may not be sublicensed, assigned, or transferred by you to any other person without publisher's written permission.

12. No Amendment Except in Writing: This license may not be amended except in a writing signed by both parties (or, in the case of publisher, by CCC on publisher's behalf).

13. Objection to Contrary Terms: Publisher hereby objects to any terms contained in any purchase order, acknowledgment, check endorsement or other writing prepared by you, which terms are inconsistent with these terms and conditions or CCC's Billing and Payment terms and conditions. These terms and conditions, together with CCC's Billing and Payment terms and conditions (which are incorporated herein), comprise the entire agreement between you and publisher (and CCC) concerning this licensing transaction. In the event of any conflict between your obligations established by these terms and conditions and those established by CCC's Billing and Payment terms and conditions, these terms and conditions shall control.

14. Revocation: Elsevier or Copyright Clearance Center may deny the permissions described in this License at their sole discretion, for any reason or no reason, with a full refund payable to you. Notice of such denial will be made using the contact information provided by you. Failure to receive such notice will not alter or invalidate the denial. In no event will Elsevier or Copyright Clearance Center be responsible or liable for any costs, expenses or damage incurred by you as a result of a denial of your permission request, other than a refund of the amount(s) paid by you to Elsevier and/or Copyright Clearance Center for denied permissions.

LIMITED LICENSE

The following terms and conditions apply only to specific license types:

15. **Translation:** This permission is granted for non-exclusive world **English** rights only unless your license was granted for translation rights. If you licensed translation rights you may only translate this content into the languages you requested. A professional translator must perform all translations and reproduce the content word for word preserving the integrity of the article.

16. **Posting licensed content on any Website:** The following terms and conditions apply as follows: Licensing material from an Elsevier journal: All content posted to the web site must maintain the copyright information line on the bottom of each image; A hyper-text must be included to the Homepage of the journal from which you are licensing at <http://www.sciencedirect.com/science/journal/xxxxx> or the Elsevier homepage for books at <http://www.elsevier.com>; Central Storage: This license does not include permission for a scanned version of the material to be stored in a central repository such as that provided by Heron/XanEdu.

Licensing material from an Elsevier book: A hyper-text link must be included to the Elsevier

homepage at <http://www.elsevier.com> . All content posted to the web site must maintain the copyright information line on the bottom of each image.

Posting licensed content on Electronic reserve: In addition to the above the following clauses are applicable: The web site must be password-protected and made available only to bona fide students registered on a relevant course. This permission is granted for 1 year only. You may obtain a new license for future website posting.

17. For journal authors: the following clauses are applicable in addition to the above:

Preprints:

A preprint is an author's own write-up of research results and analysis, it has not been peer-reviewed, nor has it had any other value added to it by a publisher (such as formatting, copyright, technical enhancement etc.).

Authors can share their preprints anywhere at any time. Preprints should not be added to or enhanced in any way in order to appear more like, or to substitute for, the final versions of articles however authors can update their preprints on arXiv or RePEc with their Accepted Author Manuscript (see below).

If accepted for publication, we encourage authors to link from the preprint to their formal publication via its DOI. Millions of researchers have access to the formal publications on ScienceDirect, and so links will help users to find, access, cite and use the best available version. Please note that Cell Press, The Lancet and some society-owned have different preprint policies. Information on these policies is available on the journal homepage.

Accepted Author Manuscripts: An accepted author manuscript is the manuscript of an article that has been accepted for publication and which typically includes author-incorporated changes suggested during submission, peer review and editor-author communications.

Authors can share their accepted author manuscript:

- immediately
 - via their non-commercial person homepage or blog
 - by updating a preprint in arXiv or RePEc with the accepted manuscript
 - via their research institute or institutional repository for internal institutional uses or as part of an invitation-only research collaboration work-group
 - directly by providing copies to their students or to research collaborators for their personal use
 - for private scholarly sharing as part of an invitation-only work group on commercial sites with which Elsevier has an agreement
- After the embargo period
 - via non-commercial hosting platforms such as their institutional repository
 - via commercial sites with which Elsevier has an agreement

In all cases accepted manuscripts should:

- link to the formal publication via its DOI
- bear a CC-BY-NC-ND license - this is easy to do
- if aggregated with other manuscripts, for example in a repository or other site, be shared in alignment with our hosting policy not be added to or enhanced in any way to appear more like, or to substitute for, the published journal article.

Published journal article (JPA): A published journal article (PJA) is the definitive final record of published research that appears or will appear in the journal and embodies all value-adding publishing activities including peer review co-ordination, copy-editing,

formatting, (if relevant) pagination and online enrichment.

Policies for sharing publishing journal articles differ for subscription and gold open access articles:

Subscription Articles: If you are an author, please share a link to your article rather than the full-text. Millions of researchers have access to the formal publications on ScienceDirect, and so links will help your users to find, access, cite, and use the best available version. Theses and dissertations which contain embedded PJAs as part of the formal submission can be posted publicly by the awarding institution with DOI links back to the formal publications on ScienceDirect.

If you are affiliated with a library that subscribes to ScienceDirect you have additional private sharing rights for others' research accessed under that agreement. This includes use for classroom teaching and internal training at the institution (including use in course packs and courseware programs), and inclusion of the article for grant funding purposes.

Gold Open Access Articles: May be shared according to the author-selected end-user license and should contain a [CrossMark logo](#), the end user license, and a DOI link to the formal publication on ScienceDirect.

Please refer to Elsevier's [posting policy](#) for further information.

18. **For book authors** the following clauses are applicable in addition to the above:

Authors are permitted to place a brief summary of their work online only. You are not allowed to download and post the published electronic version of your chapter, nor may you scan the printed edition to create an electronic version. **Posting to a repository:** Authors are permitted to post a summary of their chapter only in their institution's repository.

19. **Thesis/Dissertation:** If your license is for use in a thesis/dissertation your thesis may be submitted to your institution in either print or electronic form. Should your thesis be published commercially, please reapply for permission. These requirements include permission for the Library and Archives of Canada to supply single copies, on demand, of the complete thesis and include permission for Proquest/UMI to supply single copies, on demand, of the complete thesis. Should your thesis be published commercially, please reapply for permission. Theses and dissertations which contain embedded PJAs as part of the formal submission can be posted publicly by the awarding institution with DOI links back to the formal publications on ScienceDirect.

Elsevier Open Access Terms and Conditions

You can publish open access with Elsevier in hundreds of open access journals or in nearly 2000 established subscription journals that support open access publishing. Permitted third party re-use of these open access articles is defined by the author's choice of Creative Commons user license. See our [open access license policy](#) for more information.

Terms & Conditions applicable to all Open Access articles published with Elsevier:

Any reuse of the article must not represent the author as endorsing the adaptation of the article nor should the article be modified in such a way as to damage the author's honour or reputation. If any changes have been made, such changes must be clearly indicated.

The author(s) must be appropriately credited and we ask that you include the end user license and a DOI link to the formal publication on ScienceDirect.

If any part of the material to be used (for example, figures) has appeared in our publication with credit or acknowledgement to another source it is the responsibility of the user to ensure their reuse complies with the terms and conditions determined by the rights holder.

Additional Terms & Conditions applicable to each Creative Commons user license:

CC BY: The CC-BY license allows users to copy, to create extracts, abstracts and new works from the Article, to alter and revise the Article and to make commercial use of the Article (including reuse and/or resale of the Article by commercial entities), provided the

user gives appropriate credit (with a link to the formal publication through the relevant DOI), provides a link to the license, indicates if changes were made and the licensor is not represented as endorsing the use made of the work. The full details of the license are available at <http://creativecommons.org/licenses/by/4.0>.

CC BY NC SA: The CC BY-NC-SA license allows users to copy, to create extracts, abstracts and new works from the Article, to alter and revise the Article, provided this is not done for commercial purposes, and that the user gives appropriate credit (with a link to the formal publication through the relevant DOI), provides a link to the license, indicates if changes were made and the licensor is not represented as endorsing the use made of the work. Further, any new works must be made available on the same conditions. The full details of the license are available at <http://creativecommons.org/licenses/by-nc-sa/4.0>.

CC BY NC ND: The CC BY-NC-ND license allows users to copy and distribute the Article, provided this is not done for commercial purposes and further does not permit distribution of the Article if it is changed or edited in any way, and provided the user gives appropriate credit (with a link to the formal publication through the relevant DOI), provides a link to the license, and that the licensor is not represented as endorsing the use made of the work. The full details of the license are available at <http://creativecommons.org/licenses/by-nc-nd/4.0>. Any commercial reuse of Open Access articles published with a CC BY NC SA or CC BY NC ND license requires permission from Elsevier and will be subject to a fee.

Commercial reuse includes:

- Associating advertising with the full text of the Article
- Charging fees for document delivery or access
- Article aggregation
- Systematic distribution via e-mail lists or share buttons

Posting or linking by commercial companies for use by customers of those companies.
