To the editors of *Journal of Visualized Experiments*.

5th March 2019

**“Spider makeovers: Manipulation of color patterns in jumping spiders for use in behavioral experiments”**

Dear Dr Phillip Steindel,

We would be grateful if you would consider our revision of the enclosed manuscript for publication in JoVE.

We would also be extremely grateful if the video recording team could schedule a visit to our facilities at the University of Florida in Gainesville (Entomology and Nematology dept), before April 28th 2019, date at which I will permanently leave the USA. In fact, the earliest possible would be best as our spiders collected in May 2018 are currently starting to die from old age.

We have now requested permission to reprint and modified 2 figures from two of our previously published manuscripts, but have not received a response yet. We will send the explicit permissions as soon as we receive them.

We do hope that we can proceed with the video recording scheduling without delay.

I look forward to hearing from you.

Yours sincerely,

Malika Ihle, on my and Dr Lisa Taylor's behalf.
