Dear Robert,

Thank you very much for your email, you are welcome to re-use the figures from your previous PLOS article "Stable centrosomal roots disentangle to allow interphase centriole independence".

The article was published under a Creative Commons Attribution license (CC BY), further information about the terms of the license can be found at:
<http://journals.plos.org/plosbiology/s/content-license>.

All of our articles are available (through our websites) for anyone to download, reuse, reprint, modify, distribute, and/or copy so long as the original authors and source are cited.

The appropriate citation is:

Mahen R (2018) Stable centrosomal roots disentangle to allow interphase centriole independence. PLoS Biol 16(4): e2003998. [https:// doi.org/10.1371/journal.pbio.2003998](https://doi.org/10.1371/journal.pbio.2003998)

Please let me know if you require any further assistance.

Best wishes,

Sofia

Subject: Reprint permission

Dear PLOS Biology,

I would like to reproduce one image from a panel in the supplementary information of my 2018 PLOS Biology paper. I am writing a short methods paper, and I would like to use that image as an example of data which can be obtained with that technique.

The paper is here:

<https://journals.plos.org/plosbiology/article/file?id=10.1371/journal.pbio.2003998&type=printable>

And the image in question is one image contained in supplementary figure S6D here:

<https://journals.plos.org/plosbiology/article/file?type=supplementary&id=info:doi/10.1371/journal.pbio.2003998.s013>

Could you please let me know how to go ahead and obtain permission for reprint?

Many thanks,
Robert
