Dear Editor,

Please find enclosed a manuscript entitled "*Traction force microscopy to study B lymphocyte activation*" that we would like you to consider for publication in *JOVE*, as discussed with Science Editor B. Werth.

Our manuscript describes the main experimental protocol used in our recently published paper "*Actomyosin-driven force patterning controls endocytosis at the immune synapse*", appeared this year in Nat.Comm.(10) 2870. Will foresee that this adaptation of the classical traction force microscope protocol to the study of B cell activation may be important for immunologists and cell biologists involved in the study of small and soft cells.

We therefore hope that you will consider our manuscript for publication.

With our best regards

Paolo Pierobon
