Generating the PRMT expression constructs Transformation of expression constructs into **DH10Bac E.coli competent cells** Blue and white colony screening and recombinant bacmid DNA isolation Transfection of Sf9 cells with recombinant bacmid DNA and harvest of P1 baculovirus stock from infected cells Amplification of viral stocks from P1 to P2 by infection of Sf9 cells with P1 virus Expression screening blocks with 4ml of suspension culture of Sf9 cells infected with P1 or P2 virus Test protein purification from small scale expression screening blocks SDS-PAGE analysis of the samples from the test protein purification Infection of Sf9 suspension culture with the best P2 viruses for large-scale protein production
